================================================================================
ICT ORB CLEAN BREAKOUT — LIVE TRADE LOGGING & AUDIT FRAMEWORK
Version 2.2 | FundedNext MT5 Bot
================================================================================

================================================================================
SECTION 1 — EVERY TRADE TAKEN
================================================================================

Log every field below immediately after trade closes.

--- SIGNAL DATA ---
Timestamp of signal generation         :
Index / Instrument                     :
Session                                : EU / US
ORB High (exact price)                 :
ORB Low (exact price)                  :
ORB Range (points)                     :
Expected Range threshold               :
HTF EMA20 value at signal time         :
HTF EMA50 value at signal time         :
Trend Direction                        : BULLISH / BEARISH

--- ENTRY EXECUTION ---
Signal entry price (backtest logic)    :
Actual fill price                      :
Drift in R-multiples                   :
Spread at moment of entry (points)     :
Backtest assumed spread (points)       :
Slippage in points                     :
Entry timestamp                        :
Entry type                             : PULLBACK RETEST / DIRECT BREAKOUT

--- TRADE PARAMETERS ---
SL price                               :
SL distance in points                  :
Risk tier active                       : TIER 1 / TIER 2 / TIER 3
Risk % applied                         :
Position size (lots)                   :
Dollar risk on trade                   :
TP price (2.5R level)                  :
BE trigger price (1.0R level)          :
Account balance at entry               :
```

```
Current DD% at entry                  :

--- EXIT EXECUTION ---
Exit price                            :
Exit timestamp                        :
Exit reason                           : SL_HIT / SL_BE / TP / FORCE_CLOSE
BE triggered before exit?             : YES / NO
MFE in R (max favourable excursion)   :
MAE in R (max adverse excursion)      :
PnL in dollars                        :
PnL in R-multiples                    :
Spread at exit (points)               :
Slippage at exit (points)             :

--- POST-TRADE STATE ---
Account balance after exit            :
DD% after exit                        :
Risk tier after exit                  : TIER 1 / TIER 2 / TIER 3
Cumulative live trade count           :
Cumulative live PnL ($)               :

================================================================================
SECTION 2 — EVERY TRADE SKIPPED
================================================================================

Log every field below for every signal the bot generated but did not execute.

--- SIGNAL DATA ---
Timestamp of signal generation        :
Index / Instrument                    :
Session                               : EU / US
ORB High (exact price)                :
ORB Low (exact price)                 :
ORB Range (points)                    :
HTF Trend Direction                   : BULLISH / BEARISH

--- SKIP REASON (select one primary) ---
[ ] DRIFT_EXCEEDED          Price moved beyond 0.5R from ideal entry
[ ] NEWS_FILTER             High impact event blocked entry
[ ] DAILY_TRADE_LIMIT       Max 2 trades already taken today
[ ] DAILY_LOSS_LIMIT        Max 2 losses already hit today
[ ] DAILY_DD_CUTOFF         2% daily DD already reached
[ ] MAX_POSITIONS           2 concurrent positions already open
[ ] SL_OUT_OF_RANGE         SL outside min/max point bounds
[ ] VOLATILITY_FILTER       ORB range too wide — not coiled spring
[ ] NO_PULLBACK             Pullback window expired, no retest occurred
```

[ ] OUTSIDE_SESSION   Signal generated outside cash hours

--- DRIFT DETAIL (complete only if DRIFT_EXCEEDED) ---
Ideal entry price   :
Price at evaluation   :
Drift in R-multiples   :
Drift threshold   : 0.5R

--- BACKTEST COMPARISON ---
Would backtest have taken this trade?   : YES / NO
Reason if different from live   :

==========
SECTION 3 — LEVEL 1 EXECUTION AUDIT (COMPLETE AFTER 20 TRADES)
==========

Complete this report after 20 live trades are logged.
Purpose: Validate execution quality only. Do NOT evaluate edge or P&L.

--- VOLUME SUMMARY ---
Total signals generated   :
Total trades taken   :
Total trades skipped   :
Skip rate %   :

Skip reason breakdown:
  DRIFT_EXCEEDED   :
  NEWS_FILTER   :
  DAILY_TRADE_LIMIT   :
  DAILY_LOSS_LIMIT   :
  DAILY_DD_CUTOFF   :
  MAX_POSITIONS   :
  SL_OUT_OF_RANGE   :
  VOLATILITY_FILTER   :
  NO_PULLBACK   :
  OUTSIDE_SESSION   :

--- ENTRY EXECUTION QUALITY ---
Average entry drift (R-multiples)   :
Max entry drift observed   :
Any fills outside 0.5R tolerance?   : YES / NO
  If YES — trade numbers affected   :
Average slippage per index:
  SPX500   :
  NDX100   :
  US30   :

```
  GER30                                :
  SWI20                                :
  US2000                               :

--- COST REALITY CHECK ---
Average spread at entry per index vs backtest assumed:
  SPX500    Live:         Backtest: 0.5 pts    Delta:
  NDX100    Live:         Backtest: 1.0 pts    Delta:
  US30      Live:         Backtest: 2.0 pts    Delta:
  GER30     Live:         Backtest: 1.0 pts    Delta:
  SWI20     Live:         Backtest: 3.0 pts    Delta:
  US2000    Live:         Backtest: 0.5 pts    Delta:

Average actual cost per trade ($)      :
Average backtest modelled cost ($)     :
Cost delta per trade ($)               :
Cost running above or below model?     : ABOVE / BELOW / IN LINE

--- LOGIC VERIFICATION ---
BE trigger fired at exactly 1R?
  All trades correct                   : YES / NO
  Exceptions (trade numbers)           :

SL placement matched formula output?
  All trades correct                   : YES / NO
  Exceptions (trade numbers)           :

Position sizing matched risk tier?
  All trades correct                   : YES / NO
  Exceptions (trade numbers)           :

News filter fired on correct events?
  All trades correct                   : YES / NO
  Exceptions (trade numbers)           :

Session force-close at correct time?
  All trades correct                   : YES / NO
  Exceptions (trade numbers)           :

ORB levels match backtest calculation for same day?
  All trades correct                   : YES / NO
  Exceptions (trade numbers)           :

Risk tier stepped down correctly at DD thresholds?
  All trades correct                   : YES / NO
  Exceptions (trade numbers)           :
```

--- RED FLAGS (escalate immediately if any are YES) ---
Any fill deviating more than 0.5R?   : YES / NO
Any SL placed incorrectly?   : YES / NO
Any position size mismatch?   : YES / NO
Any signal skipped that should not be? : YES / NO
Any signal taken that should be skipped: YES / NO
Any BE trigger that did not fire?   : YES / NO
Any force-close that did not execute? : YES / NO

--- BACKTEST VS LIVE SIGNAL COMPARISON ---
This is the most important section of the audit.

Signals bot generated vs backtest would have generated for same days:
  Live signals generated   :
  Backtest signals for same period   :
  Delta   :
  Explanation for delta   :

Skipped trades that backtest would have taken:
  Count   :
  Primary reason   :
  Impact on expected trade frequency   :

--- AUDIT VERDICT ---
Execution quality rating   : PASS / FAIL / NEEDS REVIEW
Bot is faithful replica of backtest?   : YES / NO / PARTIAL
Recommended action   :
  [ ] Continue — execution confirmed, proceed to full challenge
  [ ] Investigate — specific issues flagged above need resolution
  [ ] Pause — critical discrepancy found, do not continue until resolved

Notes:

==
SECTION 4 — ONGOING LIVE MONITORING (POST-AUDIT)
==

After Level 1 audit passes, track these per-index metrics every 20 trades.

--- PER-INDEX ROLLING PERFORMANCE ---

Index	Trades	Wins	Losses	WR%	PF	Net PnL	Flag?
SPX500							
NDX100							
US30							

GER30						
SWI20						
US2000						

Flag any index where rolling PF drops below 0.8 over last 15 trades.
NDX100 is priority watch given 2026 backtest showing PF 0.44.

--- EDGE GUARD LOG ---
Trades filtered by edge guard :
Average drift on filtered signals :
% of signals filtered :
Is filter rate above 15%? : YES / NO
  If YES — investigate market conditions

--- MONTHLY SNAPSHOT ---
Month :
Trades taken :
Win rate :
Profit factor :
Net PnL :
Max DD this month :
Risk tier changes this month :
Any red flags :

==========
NOTES
==========

- Do NOT evaluate edge or strategy performance until 100+ live trades
- Do NOT intervene based on P&L during the 20-trade audit window
- The only question during audit is: is the bot executing what the backtest defined?
- Per-index tagging on every trade is mandatory — NDX100 monitoring is priority
- Compare actual vs backtest ORB levels for same calendar days whenever possible
